WE LIVE ON PLANET EARTH...
OR SHOULD WE SAY PLANET WATER?

-
The oceans cover
THREE QUARTERS
of our planet

-
Water helps
regulate
temperature changes
and turns the
oceans into a great
natural **THERMOSTAT**

-
The seas
provide us with
a huge source
of **PROTEIN** and
house immense
and little-known
BIODIVERSITY

-
Even from land, **WE CAN
DO A LOT FOR THE SEAS:**
avoiding industrial and
agricultural spills, never
throwing wet wipes in the
toilet, keeping rivers
and beaches plastic-free
and a thousand other
good actions!

**JOIN AND
PUSH FOR
CHANGE!**
