

energy transition

SHALL WE CHANGE OUR ENERGY SYSTEM SO THAT IT DOESN'T CHANGE OUR CLIMATE?

- In the next decades humanity must confront a major challenge: **ABANDON** a fossil fuel-BASED **ENERGY SYSTEM** and replace it with one based on clean energy sources

- The goal is to meet our needs with energy from the **SUN, WIND** or **WATER** instead of burning coal, petroleum or natural gas. Spain is the country of the sun and has abundant wind. Let's use it!

- Renewables have shown great capacity to provide **CLEAN ENERGY THROUGH THE ELECTRICAL GRID**. That's why electrification will be one of the key trends of the energy transition

JOIN AND PUSH FOR CHANGE!

- These widespread **CHANGES MUST HAPPEN AS SOON AS POSSIBLE** to avoid the worst effects of climate change. So it is equally important to **REDUCE OUR ENERGY USE**, promoting savings and efficiency

- The energy transition in Spain **IS AN OPPORTUNITY** to end dependency on foreign suppliers, create jobs and secure users from unstable international energy markets
